Sequence 29, Application US/08809523

Patent No. 6207416

GENERAL INFORMATION:

APPLICANT: Tearev, Sergei. A, Emerson,
APPLICANT: Suzante U., Purcell, Robert H.

TITLE OF INVENTION: Recombinant Proteins of
TITLE OF INVENTION: Recombinant Proteins of
TITLE OF INVENTION: Use In Disquestic Methods And Vaccines
NUMBER OF SEQUENCES: 107
CORRESPONDENCE ADDRESS:
ADDRESSES: MORGAN & FINNEGAN, L.L.P.
STREET: 345 PARK AVENUE

Sequence 37, Application US/09109663
Patent No. 6277981
GENERAL INFORMATION
APPLICANT: Tu, Guang-chou
APPLICANT: Israel, Yedy
TITLE OF INVENTION: AN IMPROVED METHOD FOR DESIGN AND SELECTION OF
TITLE OF INVENTION: EFFICACIOUS ANTISENSE OLIGONUCLEOTIDES
FILE REPERENCE: 9855-301
CURRENT APPLICATION NUMBER: US/09/109,663

Patent No. 6303295

GENERAL INFORMATION:
APPLICANT: Taylor, Ethan W.
TILLE OF INVENTION: SELENOPROTEINS, CODING SEQUENCES AND METHODS
TILE REFERENCE: 55-95
CURRENT APPLICATION NUMBER: 00/001203
PRIOR FILING DATE: 1995-07-12
PRIOR FILING DATE: 1995-07-14

PRIOR FILING DATE: 1995-01

NUMBER OF SEQ ID NOS: 216

SOFTWARE: PatentIN Ver. 2.0

SEQ ID NO 136

LENGTH: 21

Squence 4, Application US/09844634
Patent No. 6410324
GENERAL INFORMATION:
APPLICANT: Andrew T. Watt
TITLE OF INVENTION: ANTISENSE MODULATION OF TUMOR NECROSIS FACTOR RECEPTOR 2 EXPRE
TITLE APPLICANT: 2001-04-27
CURRENT APPLICANTON NUMBER: US/09/844,634
CURRENT PILING DATE: 2001-04-27
NUMBER OF SEQ ID NOS: 174
SEQ ID NO 4
LENGTH: 21
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 29, Application US/09402776

Sequence 29, Application US/09402776

Patent No. 6456862

GENERAL INFORMATION:
APPLICANT: Emerson, Suzanne U., Purcell, Robert H.,
APPLICANT: Emerson, Sergei. A., and Robinson, Robin A.
TITLE OF INVENTION: Recombinant Proteins Of
TITLE OF INVENTION: A Pakistani Strain Of Hepatitis E And Their
TITLE OF SEQUENCES: 111
CORRESPONDENCE ADDRESS:
ADDRESSEE: MORGAN & FINNEGAN
STREET: 345 PARK AVENUE

Sequence 7806, Application US/09422978

Patent No. 6537751

GENERAL INFORMATION

APPLICANT: Cohen, Daniel

APPLICANT: Chem, Cohen, Daniel

APPLICANT: Chumakov, Ilya

TITLE OF INVENTION Biallelic markers for use in constructing a high density...

TITLE OF INVENTION NUMBER: US/09/422,978

CURRENT APPLICATION NUMBER: US/09/422,978

CURRENT APPLICATION NUMBER: US 60/109,732

US-08-095-068-5/c

Sequence 5, Application US/08095068

Patent No. 5562643

GENERAL INFORMATION:

APPLICANT: Chang, Tew Wen; Chang, Nancy T.

TITLE OF INVENTION: an immunogen

TITLE OF INVENTION: an immunogen

NUMBER OF SEQUENCES: 19

CORRESPONDENCE ADDRESS:

ADDRESSEE: Tanox Biosystems, Inc.

GENERAL INFORMATION:

APPLICANT: Elizabeth J. Ackermann

APPLICANT: Elizabeth J. Ackermann

APPLICANT: Elizabeth J. Ackermann

APPLICANT: Lex M. Cowsert

TITLE OF INVENTION: ANTISENSE MODULATION OF CELLULAR INHIBITOR OF APOPTOSIS-2 EXPR

FILE REFERENCE: RTS-0021

CURRENT APPLICATION NUMBER: US/09/205,144

CURRENT FILING DATE: 1998-12-03

NUMBER OF SEQ ID NOS: 47

LENGTH: 18
                                                                      Sequence 545, Application US/09827998

Patent No. 6656700

Patent No. 6656700

GENERAL INFORMATION:

APPLICANT: Gu 'Yazhong

APPLICANT: Gu 'Yazhong

TITLE OF INVENTION: NOVEL ISOFORMS OF HUMAN PREGNANCY-ASSOCIATED PROTEIN E

PILE REPERRACE: MDHOMER: US/09/827,998

CURRENT APPLICATION NUMBER: US 60/207,456

PRIOR PELLING DATE: 2000-04-06

PRIOR PILING DATE: 2000-05-26

PRIOR PILING DATE: 2000-09-27

NUMBER OF SEQ ID NOS: 1881

SOFTWARE: Acomica Sequence Listing Engine

Patent No. 6656700

SEC ID NO 543

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RESULT 214

US-08-938-715B-28/C

§ Sequence 28, Application US/08838715B

§ Sequence 28, Application US/08838715B

§ Patent No. 6153595

GENERAL INFORMATION:

APPLICANT: Draper, Chapman, Kisner, Anderson

TITLE OF INVENTION: Composition and Method for Treatment

TITLE OF INVENTION: Of CWV Infection

NUMBER OF SEQUENCES: 90

CORRESPONDENCE ADDRESS:

ADDRESSEE: Jane Massey Licata, Esq.

STREET: 66 E. Main Street

CITY: Marlton

STATE: NJ

COUNTRY: USA

ZIP: 08053

COMPUTER READALE FORM:

MEDIUM TYPE: DISKETTE, 3.5 INCH, 1.44 MD STORAGE

COMPUTER: IBM 486

OPPRATING SYSTEM: WINDOWS FOR WORKGROUPS

SOFTWARE: WORDPERFECT 5.1

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/838,715B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match 0.8%; Score 14.2; DB 1; Length 19; Best Local Similarity 84.2%; Pred. No. 2.5e+02; Matches 16; Conservative 0; Mismatches 3; Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       셤
                  patent No. 542601

GENERAL INFORMATION:

APPLICANT: MORRISON, CHRISTINE J.
APPLICANT: REISS, ERROLL
APPLICANT: REISS, ERROLL
APPLICANT: REISS, ERROLL
APPLICANT: ASKER, BRENT
APPLICANT: ASKER, BRENT
APPLICANT: ASKER, BRENT
APPLICANT: ASKER, BRENT
APPLICANT: ASKER, SANDRA
TITLE OF INVENTION: NUCLEIC ACID SEQUENCES AND METHODS FOR
TITLE OF INVENTION: DETECTING DNA FROW CANDIDA CELLS IN BLOOD NUMBER OF SEQUENCES: 10
CORRESPONDENCE ADDRESS: ACCOUNTY: Atlanta
STREET: Suite 1200, 127 Peachtree Street
CITY: Atlanta
STREET: Suite 1200, 127 Peachtree Street
CITY: Atlanta
STREET: Suite 1200, 127 Peachtree Street
CITY: Atlanta
STREET: BN PC Compatible
COUNTY: USA
ZIP: 30303
COUNTY: BN PC Compatible
COUNTY: BREADABLE FORM:
MEDIUM TYPE: 1993062
SOFTWARE: PatentIN Release #1.0, Version #1.25
CURRENT APPLICATION NUMBER: US/08/065,845
FILLING DATE: 1993063
CLASSIFICATION: 436
ATTORNEY-AGSNT INFORMATION:
NAME: SPRATT, GWENDLYN D.
REGISTRATION NUMBER: 36,016
REFERENCE/DOCKET NUMBER: 1414.066
TELESAX: 404/688-800
INFORMATION FOR SEQ ID NO: 2:
SEQUENCE CHARACTERISTICS:
LENGTH: 20 Dase pairs
TYPE: NUCLEIC ACID
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 APPLICANT: INCREASE.
APPLICANT: MORRISON, CHRISTINE J.
APPLICANT: MORRISON, CHRISTINE J.
APPLICANT: MASKES, ERROLL
APPLICANT: LASKES, BRENT
APPLICANT: ZAKROFF, SANDRA
APPLICANT: ZAKROFF, SANDRA
TITLE OF INVENTION: NUCLERIC ACID SEQUENCES AND METHODS FOR
TITLE OF INVENTION: DETECTING DNA FROM CANDIDA CELLS IN BLOOD
NUMBER OF SEQUENCES: 10
CORRESPONDENCE ADDRESS:
ADDRESSE: NEEDLE & ROSENBERG, P.C.
STREET: Sulte 1200, 127 Peachtree Street

US-08-742-023-10

Sequence 10, Application US/08742023

Patent No. 5800997

GENERAL INFORMATION:

APPLICANT: Beck, James J.

TITLE OF INVENTION: Detection of Maize Fungal Pathogens
TITLE OF INVENTION: Detection of Maize Fungal Pathogens
TITLE OF INVENTION: Using the Polymerase Chain Reaction
NUMBER OF SEQUENCES: 41

CORRESPONDENCE ADDRESS:

ADDRESSES: CIBA-GENGY Corporation

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match 0.8%; Score 14.2; DB 1; Length 20; Best Local Similarity 84.2%; Pred. No. 2.7e+02; Matches 16; Conservative 0; Mismatches 3; Indels
COMPUTER READABLE FORM:
MEDIUM TYPE: DISKETTE, 3.5 INCH, 1.44 MB STORAGE
COMPUTER: IBM PS/2
OPERATING SYZEM: WINDOWS 95
SOFTWARE: WORDFRERECT 6.1
CURRENT APPLICATION DATA:
APPLICATION NUMBE: US/08/837,201C
FILING DATE: APALI 14, 1997
CLASSIFICATION NUMBE: US/08/837,201C
FILING DATE: APALI 14, 1997
CLASSIFICATION NUMBER: 134, 1997
FILING DATE: APALI 14, 1997
TELECOMOUNICATION NUMBER: 32,257
REFERENCY/AGENT INFORMATION:
NAME: Jane Massey Licata
REGISTRATION NUMBER: 32,257
REFERENCE/DOCKET NUMBER: 1SPH-0209
REGISTRATION NUMBER: 32,257
REFERENCE/DOCKET NUMBER: 1SPH-0209

Patent No. 6645720
Patent No. 6645720
GENERAL INFORMATION:
APPLICANT: Barnett, Charles Jason
TITLE OF INVENTION: Detection of Almond Pathogens Using the Polymerase Chain Reaction
CURRENT APPLICATION NUMBER: US/09/939,379B
CURRENT FILING DATE: 2002-04-08
NUMBER OF SEQ ID NOS: 30
SOFTWARE: Patentin version 3.0
SEQ ID NO 3
LENGTH: 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 147, Application US/09860473

Patent No. 6656732

GENERAL INFORMATION:
APPLICANT: C. Frank Bennett
APPLICANT: Andrew T. Watt
TITLE OF INVENTION: ANTISENSE MODULATION OF SRC-C EXPRESSION
FILE REFERENCE: RTS-0222

CURRENT APPLICATION NUMBER: US/09/860,473

CURRENT APPLICATION UNMBER: US/09/860,473

NUMBER OF SEQ ID NOS: 169

SEQ ID NO 147

Sequence 1, Application US/08323192D

Patent No. 5786199

GENERAL INFORMATION:
PALSES

TITLE OF INVENTION:
FECOMBINANT NEGATIVE STRAND RNA VIRUS
TITLE OF INVENTION:
TITLE OF INVENTION:
CORRESPONDENCE ADDRESS:
ADDRESSES:
ADDRESSES:
Pennie & Edmonds
STREET: 1155 Avenue of the Americas
CITY: New York
COUNTRY: USA
ZIP: 10036-2711
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION: A35
TILING DATE: 14-OCT-1994
CLASSIFICATION: HORBRE: 30,742
FILING DATE: 12039-9741/0864
TELEPHONE: (212) 869-9741/0864
TELEPHONE: (212) 869-9741/0864

Sequence 6817, Application US/09371772B

Patent No. 6566127

GENERAL INFORMATION:
PAPLICANT: Ribozyne Pharmaceuticals, Inc.
APPLICANT: Pavoc, Pam
APPLICANT: Secobedo, Jaime
APPLICANT: Escobedo, Jaime
APPLICANT: MCSWiggen, Jim
APPLICANT: Escobedo, Jaime
APPLICANT: MCSWiggen, Jim
APPLICANT: MCSWiggen, Jim
APPLICANT: MCSWiggen, Jim
APPLICANT: MCSWIGGEN, Jaime
TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor
TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor
FILE REFERENCE: MEMBOO, 376-J (2371,98)
CURRENT FILING DATE: 1999-08-10

PRIOR APPLICATION NUMBER: US 60/005,974

PRIOR PILING DATE: 1996-01-08

NUMBER OF SEQ ID NOS: 14225

SOFTWARE PatentIn version 3.0

LENGTH: 17

LENGTH: 17
APPLICANT: Stinchcomb, Dan
APPLICANT: Escobedo, Jaime
TITLE OF INVENTION: Method and Reagent for the Treatment of Diseases or Conditions
TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor
TITLE OF INVENTION: Levels of (237/198)
FILE REFERENCE: MBHB00,876-J (237/198)
CURRENT APPLICATION NUMBER: US (09/371,772B
FILMS DATE: 1999-08-10
FRIOR PILING DATE: 1999-10-26
FRIOR PELING DATE: 1996-10-26
FRIOR FILING DATE: 1996-01-08
NUMBER OF SEQ ID NOS: 14225
SOFTWARE: Patentin version 3.0
